

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

NEW SERIES

OF THE

MATHEMATICAL

REPOSITORY.

By THOMAS LEYBOURN,
Of the Royal Military College.

VOL. I.

London :

PRINTED AND SOLD BY W. GLENDINNING, NO. 25,
HATTON GARDEN.

1806

Hist. of Science
Bowen
 10-29-31
 24455-

CONTENTS

OF THE

FIRST VOLUME.

PART I.

MATHEMATICAL QUESTIONS.

Art.	Page.
I. Solutions to Questions proposed in No. I. viz. 1 to 30	1
II. Solutions to Questions proposed in No. I. viz. 31 to 60	81
III. Solutions to Questions proposed in No. II. viz. 61 to 90	137
IV. Solutions to Questions proposed in No. III. viz. 91 to 120	185
Notices relating to Mathematics, pages 77, 133, 183, 256.	

PART II.

ORIGINAL ESSAYS.

Art.	Page.
I. Demonstration of some Propositions relating to such portions of the surface and solidity of a sphere as may be exactly squared and cubed. By Mr. JAMES IVORY, of the Royal Military College.	1
II. Demonstration of A Theorem respecting prime Numbers. By Mr. IVORY.	6
III. Fagnani's Theorem respecting Elliptic Arches, rendered more general. By Mr. IVORY.	9
IV. A Geometrical Porism, with two examples of its application to the Solution of Problems. By SCOTICUS.	16
V. Geometrical Propositions. By Mr. IVORY.	17
VI. Solution of a Dynamical Question. By Mr. IVORY	20
VII. Of the Equilibrium of a very long and slender cylinder floating in a fluid. By Jac. RUBE.	25
VIII. Of the length of the arc of a circle in terms of the tangent. By Mr. BENJAMIN GOMPERTZ.	33
IX. Geometrical Porisms. By Mr. MARK NOBLE.	35
X. Diophantine Problems. By Mr. JAMES CUNLIFFE, of the Royal Military College.	39
XI. Problems relating to the Twilight of shortest duration. By ASTRONOMICUS.	48
XII. Certain Fluents expressible by an elliptic arch. By Mr. JAMES CUNLIFFE.	53

PART III.

MATHEMATICAL MEMOIRS EXTRACTED FROM WORKS OF EMINENCE:

Art.	Page.
I. Solutions of some Problems relative to Spherical Triangles; together with a complete Analysis of these Triangles. By I. L. LAGRANGE.	1
II. An Essay of Numerical Analysis, on the Transformation of Fractions. By I. L. LAGRANGE.	24
III. The Inverse Method of Central Forces. By Mr. JOHN DAWSON.	41

O 3-27-40. m. E. C.

ADVERTISEMENT.

The first volume of the New Series of the Mathematical Repository being now completed, it may be proper to state briefly its plan. The volume consists of three distinct parts. The first contains one hundred and twenty Questions, in almost every branch of the Mathematics. These are, with a few exceptions, entirely new, and each Question has at least one, but in general two or more answers, furnished by different ingenious Mathematicians.

The utility of this part of the work will be readily admitted when it is considered, that almost all the improvements which the Mathematics have received, have originated in the exertions made to resolve particular problems, such as that of the *trisection of an angle*, *the duplication of the cube*, &c. among the ancients; also the various *isoperimetrical problems*, and above all, the problem of *the three bodies* among the moderns. We believe also, that most Mathematicians will confess how much their talents have been cultivated and their knowledge improved, by resolving problems, such as are proposed in this volume.

The second part consists of Original Essays on
• Mathematical Subjects. This department affords an opportunity to Mathematicians to publish such papers as may be judged worthy of preservation, but which are not of such magnitude as to form a distinct work.

The third and last part is composed of Mathematical Memoirs, extracted from Works of Eminence; which are chiefly selected from the Transactions of learned Societies, and such other works as are least likely to fall into the hands of general readers.

The first number of the second volume is now published; the remaining three numbers shall follow, one every six months, so that a second volume will be completed in the course of eighteen months from this date.
