

C5.7, Topics in Fluid Mechanics

Academic year 2017-18

As those who attended the lectures to the end are aware, I was not able to cover the material in section 4.3 of the lecture notes ('`Derivation of general (3D) averaged model equations'') during the lectures. Therefore, I told students in the last lecture in week 8 that the material of section 4.3 is not examinable. Moreover, the homework question 3 of problem sheet 4 ('`Basic derivations'') is optional.
