Drafted Time Table for B8.4 Information Theory, Hilary Term 2021

Hanqing Jin

The PDF file of our lecture notes is already posted in the course webpage, which contains 4 chapters. I will keep updating the file at finding some mistakes/typos.

The following time table is a draft, and the progress may be adjusted.

- Lecture 1–4: Chapter 1 (Basic concepts and properties).

- Lecture 5–7 Chapter 2 (Typical sequences)

- Lecture 7-11 Chapter 3 (Optimal coding)

- Lecture 12–16 Chapter 4 (Channel coding)

There will be 4 problem sheets, each one to cover 4 lectures (depends on the real progress of lectures).

Problem sheets will be uploaded on or before Mondays in week 1,3,5,7.

I have an office hour at 10–11 on every Monday in the term in Teams channel B8.4.

Hope you enjoy the course.
