

STRING THEORY I

TABLE
OF
CONTENTS

II

Introduction

- 1.1 What is string theory? { lecture 1 }
- 1.2 Historical introduction

[2] Classical relativistic theory

- 2.1 Classical point particle
 - 2.2 Classical relativistic string
 - 2.3 Classical Solutions
 - 2.3.1 Equations of motion & boundary conditions
 - 2.3.2 Conserved charges
 - 2.3.3 Witt algebra & conformal symmetries
- } Lecture 2
- } Lecture 3
- } Lecture 4

13 Old covariant quantization

Hilbert space (without constraints)

Normal ordering

Virasoro algebra

Constraints and the phys.

Mass shell & level-matching condition

level 0 & 1 states; dealing with ghosts

ghosts, spurious states, null states, ghosts

Critical dimension

No ghost theorem for $1 \leq D \leq 25$, $\alpha \leq 1$

Physical states for the closed string (level 0 & 1)

Appendix: light-cone quantization

Open strings at level 2

Lecture
5

Lecture

Lecture
7

14

Interactions

4.1 Generalities

4.1 Vertex operators : introduction

4.3 Vertex operators : open string

4.4 The state vertex correspondence

4.5 3-point interactions

4.6 4-point tachyon amplitude

4.7 Comments on the general picture

lecture 10

lecture 11

5

Strings in background fields

5.1 Background field expansion and
the Weyl anomaly

5.2 Including other massless fields
 $(B \& \Phi)$

5.3 Space-time effective action

5.4 The dilaton revisited

lecture 12

lecture 13

6

Compactifications

Compactifications on a circle
(from EFT & CFT perspectives)

Lecture 14

T-duality

Lecture 15

7

Epilogue : D-branes

Lecture 16
