String theory 1

HT 2026

Introduction

lecture 1

1 Classical relativistic string

- 1.1 Classical relativistic point particle lecture 2
- 1.2 Classical relativistic string
 - Nambu-Goto action lecture 2
 - Polyakov action lecture 2/3
 - (A) Symmetries lecture 3
 - (B) Gauge fixing lecture 3
- 1.3 Classical solutions
 - 1.3.1 EOM & boundary conditions lecture 3/4
 - 1.3.2 Conserved charges lecture 4
 - 1.3.3 Solutions of EOM lecture 4
+ boundary conditions
 - 1.3.4. Conserved currents for WS diffeomorphisms lecture 4/5
 - 1.3.5. The Witt-algebra lecture 5
& conformal symmetries

2 Old covariant quantisation

- | | | |
|-----|--|-----------|
| 2.1 | Introduction | Lecture 6 |
| 2.2 | Hilbert space | Lecture 6 |
| 2.3 | Constraints, normal ordering
& Virasoro algebra | Lecture 6 |
| 2.4 | Constraints and physical states | Lecture 6 |
| 2.5 | Mass-shell
and level matching conditions | Lecture 6 |
| 2.6 | Level 1 states & dealing with ghosts | Lecture 7 |
| 2.7 | Level 2 states & dealing with ghosts | Lecture 7 |
| 2.8 | Null states and $D=26$ | Lecture 7 |
| 2.9 | Physical states of the closed string | Lecture 8 |

3 Interactions

- 3.1 Generalities Lecture 8
- 3.2 Vertex operators : Introduction Lecture 8
- 3.3 Vertex operators for the open string Lecture 8/9
- 3.4 The state vertex correspondence open strings Lecture 9
- 3.5 Vertex operator : closed string Lecture 9
- 3.6 3-point interactions Lecture 10
- 3.7 4-point tachyon amplitude Lecture 10/11
- 3.8 Comments on the general picture Lecture 11

4 Strings in background fields

4.1 Introduction

lecture 12

4.2 Background field expansion and the Weyl anomaly

lecture 12

4.3 Including other massless fields

lecture 12

4.4 Space-time effective action

lecture 13
